Color Conscious

COLOR IS VISUAL – it evokes a mood and brings out emotion. It is a way to showcase your personality and establish a tone. When choosing a color, make sure it is the right color for the emotion of the space.

BLUE

Reminiscent of the sky and water, blue is a natural color that is calming and serene. Light airy blue is said to lower blood pressure and heart rate while stronger blues clear the mind and increase productivity. In the home office, a cool blue can reduce eyestrain while increasing creativity.

RED

A color that is associated with strength and passion, red is attention-grabbing and visual. It is a physical color that raises the adrenaline. It is strong and exciting – bringing people together to stir up a conversation!

YELLOW

Cheery and energizing reminding us of the warmth of sunshine; yellow is brought into a space when you want to be uplifted and optimistic. Used in entries and small spaces it can be expansive and welcoming.

GREEN

Mixing the calmness of blue and cheeriness of yellow – green can be used in any room of the house. It is a color brought from nature that brings balance and healing to your everyday life. It can be an invigorating and inviting canvas to any space.

ORANGE

A mixture of red and yellow, orange is an active color. While bringing excitement to a living room, it is best used in a home gym to increase your energy. Citrus colors are known to stimulate metabolism, which is great in the kitchen!

PURPLE

Purple can be dramatic and stimulate imagination, perfect for a children's play area. For rooms that are truly restful and rejuvenating, lighter levels can be soft, calm and quiet. Rich, gray purples are known to enhance healing and spirituality.
