

# PORCH & FLOOR BEAUTY IN 7 STEPS

Proper surface preparation of wood or concrete is necessary to promote good adhesion.

Color shown: Cambridge 401G

**Step 1** **Clean the surface.** The entire surface should be scrubbed with detergent and water. Extremely dirty areas should be spot-cleaned. If oil or grease is present, a specialty cleaner may be needed. If mildew is present, a solution of one part bleach and four parts water will remove it.

**Step 2** **Rinse surface thoroughly after cleaning.** The entire area must be free of oil, grease, dirt, detergent, and other contaminants in order for the paint to properly adhere to the surface.

**Step 3** **Remove or dull existing paint.** On previously painted floors, remove all peeled or cracked paint prior to painting. Dull glossy painted surfaces by sanding, and remove sanding dust for better adhesion.

**Step 4** **Etch bare concrete.** New concrete must be cured for at least 30 days. Follow Step 1 and Step 2. Wet surface with clean water. Apply a solution of two parts water and one part muriatic acid at a rate of 75 square feet per gallon. Scrub surface with a stiff brush for approximately 10 minutes until bubbling stops. Rinse surface two or three times and allow to dry. Surface should have a texture similar to 120-grit sandpaper.

**Step 5** **Repair damaged surface.** Use appropriate patching compound to repair cracked or deteriorated areas.

**Step 6** **Allow surface to dry.** Tape a 2' x 2' sheet of plastic on the bare surface, sealing all the edges. After 48 hours, if moisture, discoloration, or condensation is found under the plastic, locate the source of moisture and correct it before painting.

**Step 7** **Apply paint.** Stir paint well. Do not thin. If using more than one gallon, mix paints together in one container to ensure color uniformity. For best results, use premium-quality applicators. Apply at temperatures above 50°F (10°C) and at a rate of 400 square feet per gallon. Allow 24 hours drying time before applying a second coat.

## WithSTAND® PORCH & FLOOR ENAMELS

WithSTAND® Porch & Floor Enamels are high-quality, durable, and scuff-resistant, plus they resist peeling and chipping. They are the perfect choice for your floors, porches, stairs, patios, wood and concrete.

### 100% ACRYLIC EGGSHELL

- Durable, scuff-resistant enamel
- Excellent adhesion; resists peeling and chipping
- Outstanding gloss and color retention
- Easy to apply; self-leveling
- Fast-drying - walk on in 24 hours
- Available in hundreds of custom-tinted colors

### ALKYD HIGH GLOSS

- Dries to a smooth, durable glossy finish
- Abrasion-resistant
- Especially durable for interior and exterior heavy-traffic areas
- Superior adhesion; resists peeling and chipping
- Easy to apply; self-leveling
- Available in hundreds of custom-tinted colors
